Professional Summary

Results-driven B.Tech Information Technology student with strong foundations in programming, data structures, networking, SDLC concepts, and exposure to AI-driven tools. Hands-on experience in Linux environments, web development, coding, testing, debugging, and open-source workflows. Quick learner with strong analytical, problem-solving, and communication skills, eager to contribute effectively to software development teams.

Technical Skills

Programming Languages: Python, JavaScript, C, React Js

Operating Systems: Linux (Ubuntu, Fedora, Arch Linux), Windows

Networking & Systems: Networking concepts, Linux file systems, permissions, terminal operations, system troubleshooting

Development Tools: VS Code, Git, GitHub

Data & Productivity Tools: MS Office Suite (Word, Excel, Powerpoint)

Design & Collaboration Tools: Figma, Canva

Experience

GDG BCET, Durgapur | Content Lead & Social Media Manager | June 2024 – Present

- Design digital assets and promotional posters for the community
- Manage community engagement and brand consistency for tech events, ensuring high visual hierarchy and readability across digital platforms.
- Collaborate in a remote-friendly team environment, meeting strict deadlines for event coordination.

Projects

Complaint Ticket Management System (Full Stack Project)

Developed a web-based complaint ticket system enabling users to submit issues, track status, and manage requests through a centralized dashboard.

Implemented backend APIs for ticket creation, retrieval, and status updates with database integration.

Designed authentication workflow and structured database schema for storing users and ticket data.

Built responsive frontend interface connected to backend services and tested end-to-end functionality.

Technologies: HTML, CSS, JavaScript, Node.js, MongoDB, Git

Deepfake Detection Prototype using Vision Transformers & Ensemble AI

Developed a lightweight deepfake detection system using pretrained Vision Transformer models to analyze manipulated facial images and video frames. Implemented face extraction with MTCNN and combined two models using an ensemble approach to improve prediction reliability.

Built GPU-accelerated inference pipeline with Python, PyTorch, CUDA and created a demo interface using Gradio.

Tested deployment across the local environment and Google Colab for platform-independent execution.

Technologies: Python, PyTorch, Vision Transformers, MTCNN, CUDA, Gradio, Hugging Face

Education

- **B.Tech in Information Technology** | Bengal College of Engineering and Technology | 2022 – Present
- **Higher Secondary (10+2, PCMB)** | WBCHSE | 79% (2022)
- **Secondary (10th)** | WBBSE | 81% (2020)

Interests

Photograph, Book Reading, Drawing

Language

English, Bengali, Hindi
